## **Expression of support for "Copenhagen Connecting"**

The IT University of Copenhagen expresses its strong support for the "Copenhagen Connecting" initiative. This initiative provides tremendous opportunities for Copenhagen in general and the IT University in particular. The IT University is looking forward to contributing to "Copenhagen Connecting" and taking advantage of the initiative in our education and research.

Among the many important and interesting possibilities offered by "Copenhagen Connecting" the IT University has noted the plans for offering open access to data and the need (big) analytics. These are areas where the IT University has several strong research projects and where both students and researchers would be able to contribute with innovative services and research.

The following may be used as a quote in material about "Copenhagen Connecting":

*"The IT University welcomes the exciting "Copenhagen Connecting" initiative. It promises to provide a vibrant opportunity for open innovation involving all stakeholders in the Copenhagen region." says Provost Jørgen Staunstrup, IT University of Copenhagen.*

The IT University is looking forward to participating in the further development of "Copenhagen Connecting".

Yours sincerely,

Dr. Jørgen Staunstrup, Provost  
IT University of Copenhagen
